ASX-listed gold review

The Bells Gold Tracker is a periodic review of ASX-listed gold equities and the gold market. We run through a current market theme, our current coverage, our quarterly production monitor, recent Substantial Holding Notices, gold-producers' and explorers' comparison tables, a gold equities performance "heat-map" and some key price and relative value charts.

TALKING POINT

If there is one thing that the last couple of months has brought it is increased volatility. Fortunately, in the precious metals space, it has been skewed to the upside. Measures taken to contain the COVID-19 virus have shut down and disrupted vast swathes of the global economy, spurring massive monetary policy interventions by the world's central banks and financial support packages from most Governments. After an initial liquidity squeeze, we believe we are now seeing the market position itself defensively for the safe-haven trade and a long-term, low interest rate environment. These factors have led to wild swings in valuations across a range of asset classes including gold bullion and gold equities.

We recently completed a sector report reviewing some of the issues facing production companies under our coverage ([Opportunities and threats in a fluid market](#)) and in terms of positioning for the safe-haven trade and a long-term, low interest rate environment a number of key factors emerged:

- Australia, and in particular Western Australia, is one of the most, if not the most, attractive operating jurisdictions in the world right now. A genuinely collaborative effort is being made by all stakeholders (Government, companies, employees, communities) to enable the continuous operation of mines through the COVID-19 pandemic;
- Australian assets are benefitting from all-time high A\$ gold prices, a devalued Australian dollar effectively lowering operating costs and lower energy costs due to the oil price collapse. This is resulting in very strong operating margins – illustrated in our Comparison Table - which shows even the highest cost producers generating positive All-In-Sustaining-Cost (AISC) margins (December 2019 quarter) and an average margin of A\$1,175/oz; and
- Balance sheets are generally very strong across the producers, with either relatively manageable levels of debt or net cash positions. Current conditions also point to the capacity for quick debt repayment.

Top recommendations from our coverage include RRL (Buy, TP\$5.72/sh), GOR (Hold, TP\$1.40/sh) and PNR (Buy, TP\$0.16/sh). Across the sector more generally, we would be looking for exposure to Australian assets with minimal hedging and strong balance sheets.

BELL POTTER PRECIOUS METALS COVERAGE

Table 1 - Bell Potter precious metals coverage

Prices at 14/04/2020	Market capitalisation	Price	Target price	Recommendation
Regis Resources Ltd (RRL)	\$2,119m	\$4.17/sh	\$5.72/sh	Buy
Gold Road Resources Ltd (GOR)	\$1,487m	\$1.69/sh	\$1.40/sh	Hold
Dacian Gold Ltd (DCN)	\$103m	\$0.45/sh	\$0.55/sh	Hold (Spec)
Westgold Resources Ltd (WGX)	\$832m	\$2.08/sh	\$2.45/sh	Hold
Pantoro Limited (PNR)	\$129m	\$0.11/sh	\$0.16/sh	Buy
Breaker Resources NL (BRB)	\$44m	\$0.19/sh	\$0.71/sh	Buy (Spec)
Xanadu Mines (XAM)	\$24m	\$0.03/sh	\$0.00/sh	Under review

SOURCE: BELL POTTER SECURITIES

RRL: RRL is one of our top picks among the ASX-listed gold producers due to its strong balance sheet, low costs, capital efficient growth and high shareholder returns. Furthermore, we view RRL's 100%-owned organic growth options as a strategic advantage vs peers and the McPhillamys development project in NSW as undervalued by the market.

GOR: Gruyere's production ramp-up is virtually complete. Recent in-fill and extension drilling below the previous pit outline has seen the Gruyere JV upgrade the Measured and Indicated Resource component by 29% after mining depletion and lift total Gruyere Resources to 6.6Moz at a gold price of A\$1,850/oz ahead of an updated Reserve later in the year. GOR's 2020 guidance for its share of Gruyere production is 125-142.5koz at an average AISC of A\$1,100-A\$1,200/oz. GOR 100% owned regional exploration continues in its \$26m 2020 exploration budget.

DCN: Its A\$200m, 2.5Mtpa Mount Morgans Gold Project declared commercial production on January 1, 2019 originally targeting production of +200kozpa at AISC of ~A\$1,000/oz. Poor Reserve reconciliations have led to multiple Resource and Reserve downgrades and mine plan revisions. A major recapitalisation (~\$98m) is in the process of being completed to repair the balance sheet. Production is expected to decline from ~140kozpa in FY20 to 100-110kozpa in FY22. Resources have been cut from 3.5Moz @ 2.0g/t Au to 2.1Moz @ 2.0g/t Au and Reserves from 1.4Moz @ 1.6g/t Au to 0.75Moz @ 1.4g/t Au.

WGX: Production recently began from sub-level caving at Big Bell, which will ramp-up over the course of 2020, marking the completion of WGX's four year mine re-development and refurbishment program. The company is now generating growing free cash flow from its sole focus on the three Murchison mining operations following the spin out and ASX-listing of its NT polymetallic assets at the start of 2020.

PNR: Following a difficult CY19 during which its Nicolson's operation was mining constrained and underperformed, we continue to look for production improvements in coming quarters to drive a valuation uplift. The recent acquisition of a 50% managing interest in the Central Norseman Gold Project (CNGP) adds a second high grade project that is well suited to PNR's skill-set. Exploration results and development planning are the key catalysts here in coming quarters.

BRB: Is continuing to advance its 100% owned Lake Roe Gold Project, located 100km east of Kalgoorlie, 60km south-southeast of the operating 3.5Moz Carosue Dam gold mine. In September 2019 an updated Resource of 23.2Mt @ 1.3g/t Au for 981koz contained gold was announced, including 803koz @ 1.4g/t Au in the Indicated category and a high grade core of 673koz @ 2.2g/t Au. While Resource growth has been slower than expected we remain of the view that Lake Roe is a compelling greenfields gold discovery with potential for either standalone development or as a bolt-on acquisition.

XAM: Further limited assessment of shallow oxide gold mineralisation prospects (Golden Eagle, Stockwork Hill and Copper Hill) within the 76.5% owned flagship Kharmagtai Copper-Gold Project in Mongolia continues as part of the investigation of a possible "starter" project to help funding of the potentially much larger copper-gold development. Drilling of further major primary copper-gold targets recently yielded impressive results that will be followed up while JOGMEC is to spend up to US\$7.2m under deal to explore the Red Mountain Project.

CHANGES IN SUBSTANTIAL HOLDINGS

(over the last month)

Increases:

SPX/RMS: RMS increases to 75.5% (under takeover);

RED: Ruffer LLP increases from 6.9% to 8.0%;

WGX: Fidelity increases from 6.7% to 9.8%;

BLK: Sparta AG (Delphi Unternehmensberatung) increases from 19.8% to 39.0% via Placement;

BGL: BlackRock becomes substantial at 10.2%;

RSG: IPConcept (Luxembourg) becomes substantial at 5.2%;

BGL: Van Eck (GDXJ) increases from 5.1% to 6.4%;

RSG: Vanguard becomes substantial at 5.1%;

NCM: Allan Gray increases from 9.9% to 10.9%;

MML: Ruffer LLP increases from 14.9% to 16.1%;

SLR: Vanguard becomes substantial at 5.1%;

PRU: Vanguard becomes substantial at 5.1%;

Decreases:

HRZ: Orion Mine Finance decreases from 7.9% to 6.2%;

RED: Regal Funds decreases from 9.3% to 7.8%;

SAR: Van Eck (GDX + GDXJ) decreases from 12.0% to 11.0%;

PRU: Van Eck (GDX + GDXJ) decreases from 12.0% to 11.0%;

NST: Van Eck (GDX + GDXJ) decreases from 11.9% to 10.7%;

GOR: Van Eck (GDXJ) decreases from 8.7% to 7.6%;

SBM: Van Eck (GDX + GDXJ) decreases from 12.2% to 11.1%;

RRL: Van Eck (GDX + GDXJ) decreases from 12.6% to 11.4%;

OGC: Van Eck (GDX + GDXJ) decreases from 12.5% to 11.5%;

WGX: Van Eck (GDXJ) ceases to be substantial;

RMS: Van Eck (GDXJ) ceases to be substantial;

SLR: Van Eck (GDXJ) ceases to be substantial;

NCM: BlackRock decreases from 11.2% to 10.2%;

RRL: Vinva Investment Management ceases to be substantial;

RMS: Vinva Investment Management ceases to be substantial;

SPX/CHN: Chalice Gold Mines (CHN) ceases to be substantial;

ASX QUARTERLY PRODUCTION MONITORS TO DECEMBER 2019

The tables and charts below monitor the quarterly production and cost progress against guidance for the largest ASX gold producers. The tables show actual production and costs vs the company’s guidance midpoint. Variance vs the midpoint is highlighted in green or red according to whether the company is tracking ahead of or behind guidance respectively.

NOTE: This purely measures changes in net cash (debt) qoq net of equity raising inflows and dividend payment outflows over gold ounces produced. Therefore, over and above cash outflows measured by the AISC, it will also capture capital investments in new projects, debt repayments/drawdowns, asset acquisitions and divestments, gold forward sales, timing of sales, cash tax payments and other one-off items impacting quarterly cash movements over and above the ongoing operations. Companies with by-products have cash changes measured over gold ounces only, exaggerating this metric.

GOLD EQUITIES – PERFORMANCE HEAT MAP

We previously noted that performance in the sector has been dominated by the larger, multi-mine producers, but that we had expected this to begin to flow down to the smaller names should we see an extension of the current gold price rally and stronger momentum in the market. This has eventuated to a degree, but still on a selective basis as liquidity has dampened upside at the smaller end of the market. M&A has been a key driver of outperformance among the explorers and developers, as well as exploration success. This should be no surprise – these are key reasons for investing in this group – but that there is M&A activity crystallising value and the market is giving recognition for good drilling results signals that the market remains open and sentiment is positive.

GOLD IN CHARTS - PRICES

From a technical point of view the gold price looks very strong, if a little extended in A\$-terms where it lifted to 20% ahead of its 200dma at the end of March. This is a similar level to August 2019, which preceded a period of consolidation and slightly lower prices. Looking at the US\$ price chart, however, shows the price much less extended and volatility a much stronger feature, trading across a US\$220 range in just the last month. We view this as supportive for the near-term outlook.

Figure 17 – Rolling 2yr US\$ gold price and 200dma divergence

SOURCE: IRESS, BELL POTTER ESTIMATES

Figure 18 – Rolling 2yr A\$ gold price and 200dma divergence

SOURCE: IRESS, BELL POTTER ESTIMATES

Silver's volatility has left gold for dead, trading over a 56% trough-to-peak range in the last 6 weeks in US\$-terms. While silver has struggled to hold onto gains and is now on the end of a 9-year outperformance hiding vs gold (see Figure 19), we are of the view that silver is relatively cheap right now and worth accumulating as a potentially leveraged alternative to gold.

SOURCE: IRESS, BELL POTTER ESTIMATES

Figure 20 – Rolling 2yr A\$ silver price and 200dma divergence

SOURCE: IRESS, BELL POTTER ESTIMATES

We had been watching the gold:silver ratio for an indication of bullish sentiment, but that has arrived without silver outperformance. What we do see now is what may be a compelling value opportunity. Gold still does not look expensive and in a supportive gold price environment we believe it is more likely silver has catching up to do rather than gold pulling back.

GOLD IN CHARTS – EQUITY PERFORMANCE AND INDICATORS

The charts below monitor the performance of gold equities vs gold bullion. Relative outperformance of the equities is, in our view, a good indicator of positive sentiment. Across all three Indices (GDX, GDXJ and XGD) volatility is a key recent feature, driven by big moves in both the gold price and the equities. While the equities initially suffered as a source of liquidity (more so than gold bullion) the most recent moves show outperformance and we view this as likely to continue.

Figure 23 – Relative performance: GDX vs US\$ gold

SOURCE: IRESS, BELL POTTER ESTIMATES

Figure 24 – Relative performance: GDXJ vs US\$ gold

SOURCE: IRESS, BELL POTTER ESTIMATES

Global gold ETF holdings have surged a further 11% above the recent 7-year high set in October 2019, reflecting a new flight to safety over and above the prior positive sentiment and asset re-allocation trends we had observed through 2019.

Figure 25 – Relative performance: XGD vs A\$ gold

SOURCE: IRESS, BELL POTTER ESTIMATES

Figure 26 – Total known ETF gold holdings

SOURCE: BLOOMBERG

Real interest rates (as measured by US 5yr TIPS) have shown extreme volatility over the last 6 weeks as the US Federal Reserve implemented a 50bps out-of-cycle emergency rate cut in early March, a 100bps cut in mid-March and massive new quantitative easing programs. The overall trend for real interest rates remains negative and similar actions by Central Banks globally we believe creates a very supportive environment for the gold price, notwithstanding some US\$ strength.

Recommendation structure

Buy: Expect >15% total return on a 12 month view. For stocks regarded as 'Speculative' a return of >30% is expected.

Hold: Expect total return between -5% and 15% on a 12 month view

Sell: Expect <-5% total return on a 12 month view

Speculative Investments are either start-up enterprises with nil or only prospective operations or recently commenced operations with only forecast cash flows, or companies that have commenced operations or have been in operation for some time but have only forecast cash flows and/or a stressed balance sheet.

Such investments may carry an exceptionally high level of capital risk and volatility of returns.
